TEST REPORT FOR ARCONIC ARCHITECTURAL PRODUCTS

Report No.: 105251812COQ-001 R0

Date: 01/30/23

REPORT ISSUED TO

ARCONIC ARCHITECTURAL PRODUCTS

50 INDUSTRIAL BLVD

EASTMAN, GA 31 USA

SECTION 1

SCOPE

Intertek Building & Construction (B&C) was contracted by Arconic Architectural Products 50 Industrial Blvd Eastman, GA 31 USA. to perform testing in accordance with CAN/ULC S102-18, Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies., on their 4mm thick Reynobond FR panels with Core 12. Results obtained are tested values and were secured by using the designated test method(s). Testing was conducted at Intertek Testing Services NA Ltd. (Intertek) test facility in Coquitlam, BC Canada.

Unless differently required, Intertek reports apply the "Simple Acceptance" rule also called "Shared Risk approach," of ILAC-G8:09/2019, Guidelines on Decision Rules and Statements of Conformity.

Intertek B&C will service this report for the entire test record retention period. The test record retention period ends four years after the test date. Test records, such as detailed drawings, datasheets, representative samples of test specimens (where required by Certification or Accreditation bodies), or other pertinent project documentation, will be retained for the entire test record retention period.

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample(s) tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

TEST REPORT FOR ARCONIC ARCHITECTURAL PRODUCTS

Report No.: 105251812COQ-001 R0

Date: 01/30/23

SECTION 2

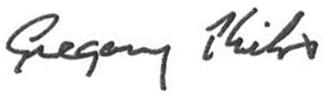

SUMMARY OF TEST RESULTS

The samples 4mm thick Reynobond FR panels with Core 12 submitted by Arconic Architectural Products were tested in accordance with CAN/ULC S102-18, Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.

The product test results are presented in Section 10 of this report.

For INTERTEK B&C:

Report No.: 105251812COQ-001 R0

Date: 01/30/23

SECTION 3

TEST METHOD(S)

The specimens were evaluated in accordance with the following:

CAN/ULC S102-18, Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.

SECTION 4

MATERIAL SOURCE/INSTALLATION

Samples were submitted to Intertek directly from the client and were not independently selected for testing and Intertek accepts no responsibility for any inaccuracies provided.

SECTION 5

Date: 01/30/23

SECTION 7

TEST CALCULATIONS

The results of the tests are expressed by indexes, which compare the characteristics of the sample under tests relative to that of select grade red oak flooring and inorganic-cement board.

(A) Flame Spread Rating:

This index relates to the rate of progression of a flame along a sample in the 7620 mm tunnel. A natural gas flame is applied to the front of the sample at the start of the test and drawn along the sample by a draft kept constant for the duration of the test. An observer notes the progression of the flame front relative to time.

The test apparatus is calibrated such that the flame front for red oak flooring passes out the end of the tunnel in five minutes, thirty seconds (plus or minus 15 seconds).

(B) Smoke Developed:

A photocell is used to measure the amount of light, which is obscured by the smoke passing down the tunnel duct. When the smoke from a burning sample obscures the light beam, the output from the photocell decreases. This decrease with time is recorded and compared to the results obtained for red oak, which is defined to be 100.

SECTION 8

TEST SPECIMEN DESCRIPTION

Upon receipt of the samples at the Intertek Coquitlam laboratory they were placed in a conditioning room where they remained in an atmosphere of $23 \pm 3^{\circ}\text{C}$ ($73.4 \pm 5^{\circ}\text{F}$) and $50 \pm 5\%$ relative humidity.

The sample material consisted of 610mm wide by 2440mm wide. was identified as 4mm thick Reynobond FR panels with Core 12.

For each trial run, six 610mm wide by 1220mm of sample material was placed on the upper ledge of the flame spread tunnel to form the required 7315mm sample length. A layer of 6 mm. reinforced cement board was placed over top of the samples, the tunnel lid was lowered into place, and the samples were then tested in accordance with CAN/ULC S102-18.

TEST REPORT FOR ARCONIC ARCHITECTURAL PRODUCTS

Report No.: 105251812COQ-001 R0

Date: 01/30/23

SECTION 9**TEST RESULTS****(A) Flame Spread**

The resultant flame spread ratings are as follows:

(Rating rounded to nearest 5)

4mm thick Reynobond FR panels with Core 12	Flame Spread	Flame Spread Rating
Run 1	0	0
Run 2	0	
Run 3	0	

(B) Smoke Developed

The areas beneath the smoke developed curve and the related classifications are as follows:

(Classification rounded to nearest 5)

4mm thick Reynobond FR panels with Core 12	Smoke Developed	Smoked Developed Classification
Run 1	5	5
Run 2	10	
Run 3	6	

(C) Observations

During the test runs, surface ignition occurred between 140 and 168 seconds. The flame then began to progress along the sample length until it reached the maximum flame spread. This was the case for all three test runs.

TEST REPORT FOR ARCONIC ARCHITECTURAL PRODUCTS

Report No.: 105251812COQ-001 R0

Date: 01/30/23

SECTION 10

CONCLUSION

The samples of 4mm thick Reynobond FR panels with Core 12 submitted by Arconic Architectural Products exhibited the following flame spread characteristics when tested in accordance with CAN/ULC S102-18, Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.

A series of three test runs of material was conducted to conform to the requirements of the National Building Code of Canada.

Sample Material	Flame Spread Rating	Smoke Developed Classification
4mm thick Reynobond FR panels with Core 12	0	5

The conclusions of this test report may not be used as part of the requirements for Intertek product certification. Authority to Mark must be issued for a product to become certified.

Total Quality. Assured.
